

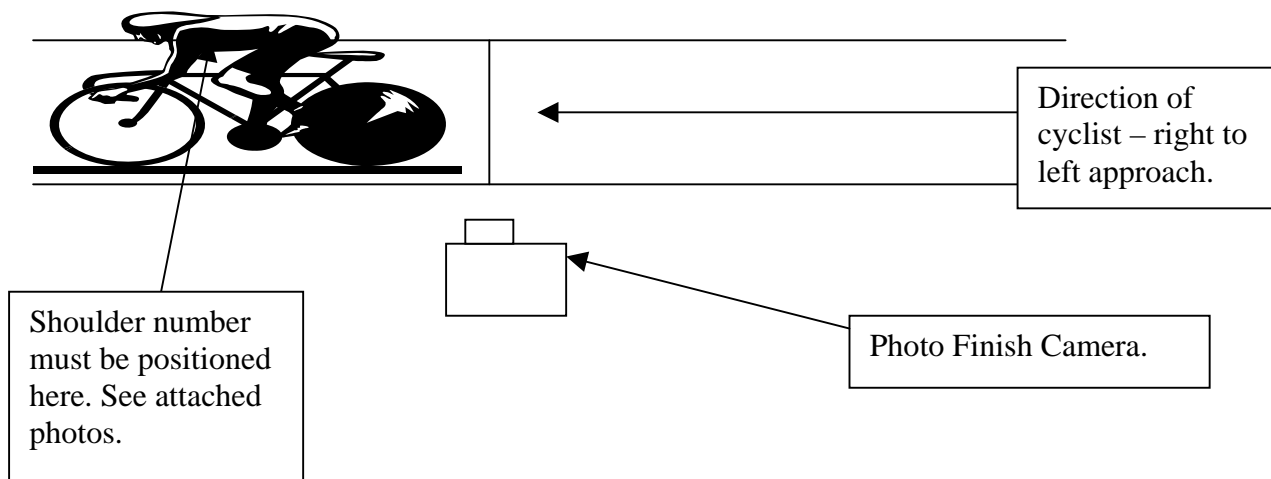

Photo Finish Requirements

Numbers must be positioned on the shoulder & back as per the example featured on page 2. Note, the numbers must face the camera. Both a good and bad example is shown.

If for example the riders finish from right to left (typical track race set-up) then the number must be positioned on the riders left shoulder facing the camera

There are many cases due to the road layout the camera cannot be ideally located but organisers should bear in mind whatever side of the road it is positioned on then the **number must always face it** .

One small point – white numbers on a blue background are not clear, try to avoid them. Black numbers on white background are the best.

One other point especially in early and late season afternoon events try to position the camera with the sun behind it. The low sun shining directly into the camera lens is not ideal!

White finish line – we have tape but if its wet then it doesn't stick so a painted line is preferable or a thick chalk line.

Start sheet – preferably this is sent to us via email in excel spreadsheet format. It should be presented in the following way.

Race number, Second name, First name, Club.

Each of the above should be in **separate cells** as per example below.

49	Booker	Jim	Wobbly Whlrs
64	Smith	Frank	Lands End CC

Good number examples easily read

Bad number example cannot be read
